Advantages of a SCR System With Integrated Silencer and Type Approved Spark Arrestor

- Prepared Silencer to SCR
- NOx Reduction > 80%
- Vanadium Based Catalyst
- Built in Spark Arrestor
- Attenuation > 45 dB(A)
- Custom Made Design
- Certified High Class Materials
- Minimum Back Pressure
- Manufactured by AXCES

Moving forward towards 2016 and in-line with current EPA and IMO standards, regulating the release of harmful NOx compounds from exhaust systems.

The integrated SCR/Silencer reactor is a novel solution making AXCES a market leader in this field. The new IDE NOx reactor can be swapped with the existing noise reduction elements.

This upgrade of reactor leads to a reduction in the release of toxic NOx compounds through selective catalytic reduction, at the same time operating as a exhaust silencer.
